

How to Use AI in Language Teaching?

Presenter:

Pouya Mahmoudi
PhD Student in Applied Linguistics
University of Tehran

Organized by:

Iran's Union of Foreign Languages and Linguistics

The University of Tehran English Language Scientific Student Association (UTELSSA)

Two Main Categories of AI-Assisted Language Teaching

AI ChatBots

Interactive AI systems that can engage in conversation with language learners, providing practice opportunities and immediate feedback.

AI-Based Tools

Specialized applications that assist with specific aspects of language teaching such as content creation, presentation, and evaluation.

AI ChatBots

1 ChatGPT

A versatile AI chatbot developed by OpenAI that can assist with language practice, answer questions, and generate educational content.

2 DeepSeek

An AI system designed for deep language understanding and generation capabilities.

3 Perplexity

A research-focused AI that can provide detailed explanations and references for language concepts.

4 Gemini

Google's multimodal AI system that can process text, images, and other inputs for language learning.

5 CoPilot

Microsoft's AI assistant that can help with writing, coding, and language tasks.

AI-Based Tools

Content Creation

HeyGen, ElevenLabs, Diffit

Tools for generating language learning materials, audio content, and customized exercises.

Presentation

Gamma, Prezi

Platforms for creating engaging visual presentations for language teaching.

Evaluation

Quizlet, Socrative, Twee, Diffit, EdPuzzle

Systems for assessing student progress, creating quizzes, and providing feedback on on language performance.
