9 مجلات معتبر به چه مجلاتی گفته می شوند؟

- مجلات معتبر در دنیای علم و پژوهش، مجلاتی هستند که از سوی مراکز علمی و دانشگاهها تأیید شده‌اند و برای انتشار مقالات علمی به آنها اعتبار داده می‌شود.
- این مجلات معمولاً دارای ویژگی‌هایی نظیر **نمایه شدن در پایگاه‌های معتبر مانند ISI و Scopus**، **ضریب تأثیر بالا**، **هیئت‌داوران قوی** و **تطابق با زمینه کاری محققان** هستند.

10

What criteria would you consider
when identifying journals to
publish your research?

11 معیارهای انتخاب مجله / نشریه ISI مناسب

- حیطه مجله (scope)
- نمایه شدن مجله / نشریه (index)
- ضریب تأثیر مجله / نشریه (Impact Factor)
- تعداد شماره‌های چاپ در سال
- نرخ رد یا پذیرش مقالات (Acceptance)
- مشخص بودن فرآیند داروی (Editorial Times)
- قرار نداشتن در لیست مجلات نامعتبر

Impact factor (IF)

How do we calculate the Impact Factor

$$\text{IMPACT FACTOR 2006} = \frac{\text{CITATIONS 2004-2005}}{\text{PUBS 2004-2005}}$$

شاخص Q چیست و چگونه محاسبه می شود؟

17

- پایگاه نشر JCR که متعلق به موسسه تامسون رويترز است به همراه موسسه اسکوپوس که آن هم پایگاهی برای نمایه کردن مجلات معتبر است در هر سال از شاخصی موسوم به Q برای رتبه بندی مجلات استفاده می کنند.
- براساس این شاخص که به ۴ دسته Q1، Q2، Q3 و Q4 تقسیم می شود، امکان مشخص کردن جایگاه هر مجله از بین چهار چهارک موجود در زیرگروه تخصصی اش میسر می گردد.
- اگر مجله ای بتوانید در بخش اول یعنی چارک نخست و همان Q1 قرار بگیرد، یعنی در بهترین جایگاه در میان مجلات تخصصی زیرگروه خودش قرار گرفته است.

•

Quartiles Ranking Based on IF Distribution

-
- **Q1**: Top 25% of journals in a particular field based on Impact Factor
 - **Q2**: Second quartile, comprising journals with Impact Factors higher than the median but lower than the top 25%
 - **Q3**: Third quartile, encompassing journals with Impact Factors lower than the median but higher than the bottom 25%
 - **Q4**: Bottom 25% of journals based on Impact Factor

JOURNAL CITATION گزارش استنادی مجلات (REPORTS)

- پایگاه داده اطلاعاتی JCR بیش از ۷۵۰۰ مجله معتبر را در حدود ۲۰۰ حوزه موضوعی از سال ۱۹۹۷ به بعد در بر می گیرد و با استفاده از آن می توان مجلات و ژورنال ها را در حوزه های تخصصی، طبقه بندی و شاخص های رتبه بندی آنها را مورد ارزیابی قرار داد. پایگاه داده اطلاعاتی JCR دارای دو نسخه می باشد که نسخه علمی آن در بر گیرنده بیش از ۶۰۰۰ مجله علمی و نسخه علوم اجتماعی مشتمل بر ۱۸۰۰ مجله می باشد. پایگاه داده اطلاعاتی JCR از طریق Web of knowledge به شرط پرداخت وجه اشتراک قابل دستیابی است.

پایگاه اسکوپوس

- یک پایگاه اطلاعات علمی می باشد که یکی از مهمترین پایگاه نمایه سازی مجلات علمی جهان به شمار می آید و در سال ۲۰۰۴ توسط شرکت Elsevier راه اندازی شده است.
- پایگاه اسکوپوس نیز همانند پایگاه ISI اقدام به بررسی علمی مجلات و نشریه ها کرده و در صورت رعایت استاندارد های این پایگاه اقدام به نمایه سازی آن می نماید. پایگاه اسکوپوس در حدود ۳۵۰۰۰ مجله را پوشش می دهد.

سایت اسکور

- یک شاخص ساده برای اندازه‌گیری تاثیر استنادی مجلات است. بر خلاف ضریب تاثیر که انواع خاصی از مقالات (مروری و پژوهشی و فنی) را در محاسبه تعداد مقالات در مخرج کسر در نظر می‌گیرد، این شاخص همه انواع مقالات را در محاسبه خود در نظر می‌گیرد.
- یک مورد خاص که در سایت اسکور وارد محاسبه نمی‌گردد، مقالات In press است. از آنجایی که اسکوپوس همه مقالات In press را از ناشران مختلف دربرنمی‌گیرد، لذا برای اجتناب از bias در محاسبات این شاخص استنادی، مقالاتی که هنوز در شماره‌ای از مجله وارد نشده‌اند، در محاسبه سایت اسکور وارد نمی‌شود.

Warning Signs for Poor Journals ☹

- Similar name to popular journals
- Poor homepage of their website
- Very wide & different journal scope
- Plagiarism
- Uneven articles quality
- **Incorrect** impact factor
- **Not indexed** in scientific database as Scopus & ISI

WARNING

Some factors to consider

- Audience
- Prestige
- Access
- Impact
- Publication time
- Quality of reproduction
- Likelihood of acceptance

Instruction for authors

-
- Instructions to authors basically cover three important aspects of the publication process that are important for every author:
 - **Journal's purpose, scope, and policies.**
 - **Manuscript preparation guidelines.**
 - **Manuscript submission process.**

Search for Journals/Authors/Articles

Welcome to Jane

Have you recently written a paper, but you're not sure to which journal you should submit it? Or maybe you want to find relevant articles to cite in your paper? Or are you an editor, and do you need to find reviewers for a particular paper? Jane can help!

Just enter the title and/or abstract of the paper in the box, and click on 'Find journals', 'Find authors' or 'Find Articles'. Jane will then compare your document to millions of documents in PubMed to find the best matching journals, authors or articles.

Keyword search

Instead of using a title or abstract, you can also search using a keyword search, similar to popular web search engines. Click [here](#) to search using keywords.

Beware of predatory journals

JANE relies on the data in PubMed, which can contain papers from predatory journals, and therefore these journals can appear in JANE's results. To help identify high-quality journals, JANE now tags journals that are currently indexed in MEDLINE, and open access journals approved by the Directory of Open Access Journals (DOAJ).

between the two groups in terms of sexual orientation ($p=0.559$), but sexual dissatisfaction with gender at birth in males was significantly higher than in females ($p<0.001$). In addition to HIV-related features between male and female TG participants, women were significantly more likely to engage in unprotected intercourse than men ($p=0.001$), while the hormone injection by men was significantly higher than women ($p=0.018$). Regarding perceived barriers of women and men TG individuals, the chi-square test and phi correlation coefficient test showed that perceived financial, medical, and social barriers were not significantly different between the two groups ($P>0.05$). However, women reported more familial barriers than men ($p=0.006$).

Conclusion: The results of this study indicated that both women and men have experienced equal financial, medical, and social challenges in the health system, but women face more constraints in their family lives. Therefore, it is recommended that healthcare providers pay special attention to increasing awareness and improving the mental and physical health of TG individuals and also to reduce discrimination and violence in the family and society, and support measures should be taken by family members, friends, and community members.

Keywords: Transgender, Sexual identity, health status, sexually transmitted diseases, barriers

Journal publishing process

Submission

- Selection of the journal
 - Usually decided during later stages of writing
 - What to take into account
 - Appropriate for the topic, for the style (it is strange to submit to a journal, which you do not cite)
 - Impact factor
 - Speed of processing (take care for tricks - as resubmission instead of major revision)
 - Availability of the journal (publisher)
 - Page charge, open access (is paid)

45

Choosing a journal

8 by SAGE

Submission (electronic)

- Cover letter – very important
- Usually, you can suggest reviewers (do not suggest your recent co-authors, or people from your department), good to cite the suggested reviewers
- Often, you can suggest reviewers to be avoided
- You can sometimes suggest the handling editor

Submitting the paper

- Traditional submission (by mail)—now rare
- Electronic submission
 - Commonly via online submission system
 - Sometimes as e-mail attachment
- Inclusion of a cover letter (conventional or electronic)
- Completion of required forms

Cover Letter:

- Title and author(s) of paper
- Type of submission (full length article/ technical note)
- Fact that paper is new and not being submitted elsewhere
- Why the paper is important
- Some possible peer reviewers (some journal request that)

50 COVER LETTER

Dear Editor

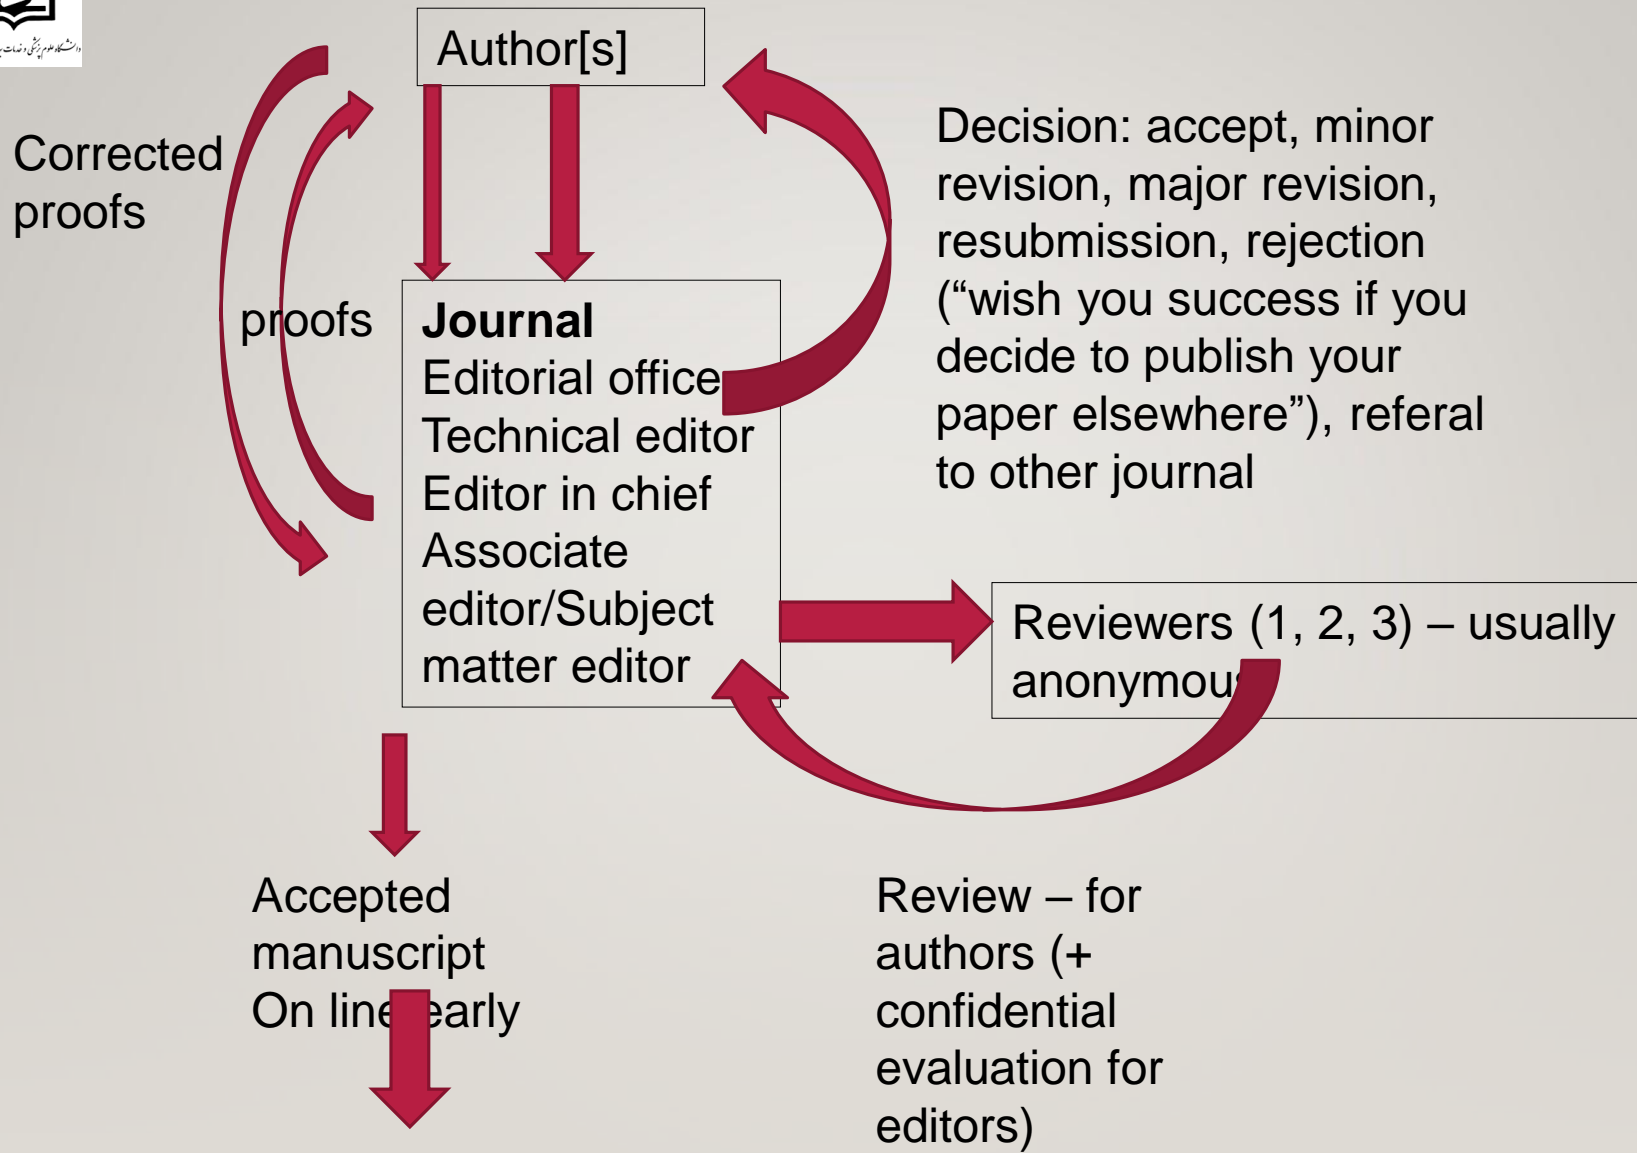

Enclosed please find a manuscript entitled "Simulation of Forced Convection in a Channel with Nanofluid by the Lattice Boltzmann Method" which we would like to submit for publication in Nanoscale Research Letters. We believe that the novel idea applying lattice Boltzmann method for predicting heat transfer enhancement using nanofluid in channel with extended surface would appeal to the readership of the Journal. We confirm that this manuscript has not been published elsewhere and is not under consideration by another journal. All authors have approved the manuscript and agree with its submission. Thank you for your consideration of our work.

Sincerely Yours
Dr. Nor Azwadi Che Sidik
Department of Thermofluid
Faculty of Mechanical Engineering
Universiti Teknologi Malaysia
Malaysia

What happens after I've submitted my manuscript?

Attracting the editor/reader

- There are lots of opportunities for rejection!
- Remember: your paper is competing with many others for the attention of editors and readers
- Title
 - Brief, interesting and accurate
- Abstract
 - Attract readers to your paper
 - Aim for 4 sections: why, how, what and implications
 - Include important keywords for searching
 - Make it clear and easy to read

Writing the Paper: Key Points

- **Strong Introduction**
 - Engage the reader
 - Set the scene, explain why the work is important, and state the aim of the study
- **Clear, logically organised, complete Methods**
 - Provide enough information to allow assessment of results (could someone else repeat the study?)
- **Results**
 - Be clear and concise; avoid repetition between text, tables and figures
- **Relevant Discussion**
 - Start strongly – were aims achieved?
 - Discuss significance and implications of results

What editors look for in a manuscript

- Quality
 - good science: well planned, well executed study
 - good presentation
- Significance and originality
- Consistent with scope of journal
- Demonstrated broad interest to readership
- Will it cite?
- Well written 'story'

Peer review - how are referees chosen?

-
- Technical/specialist expertise
 - Broad knowledge of field
 - Independence from authors and their institutions
 - Previous record of fair/constructive reviewing or reviewing a related manuscript
 - Availability under time constraints

what makes a good paper?

hint: editors and reviewers look for

- Originality – what's **new** about subject, treatment or results?
- Relevance to and extension of existing knowledge
- Research methodology – are conclusions valid and objective?
- Clarity, structure and quality of writing – does it communicate well?
- Sound, logical progression of argument

understanding reviews: what makes a good review

-
- Good reviews provide the editor with the information on which a decision can be based
 - The best are *insightful, articulate* and *constructive*
 - They tell the editor:
 - What is interesting about the paper
 - How the results are significant
 - What can be done to improve the paper
 - If the paper is not publishable and why

Detailed comments in the review

- A good review answers the following questions and provides suggestions for improvement:
 - Does the introduction explain why the work was done and the hypothesis being tested?
 - Is the experimental/study design appropriate?
 - Are the methods clearly described to enable full assessment of the results?
 - Is the analysis appropriate?
 - Are the results presented effectively?
 - Is the work discussed in the context of all relevant literature?
 - Does the discussion make clear the significance and wider implications of the work?
 - Are the conclusions supported by the data presented?

Revising a paper

- Revise and resubmit promptly.
- Indicate what revisions were made.
 - Include a letter saying what revisions were made. If you received a list of requested revisions, address each in the letter.
 - If requested, show revisions in Track Changes.
- If you disagree with a requested revision, explain why in your letter. Try to find a different way to solve the problem that the editor or reviewer noted.

Responding to referees' reports

-
- Read the editor's letter first for instruction
 - Take a deep breath: proceed to the reports
 - Put them aside for a day, or two, a week...
 - Re-read reports and discuss with coauthors ...
 - Revise paper and prepare response document
 - Remember –
 - Even comments that seem aggressive or ignorant can be helpful
 - Always view this as a chance to improve the paper

62 **Good response to referees' reports are**

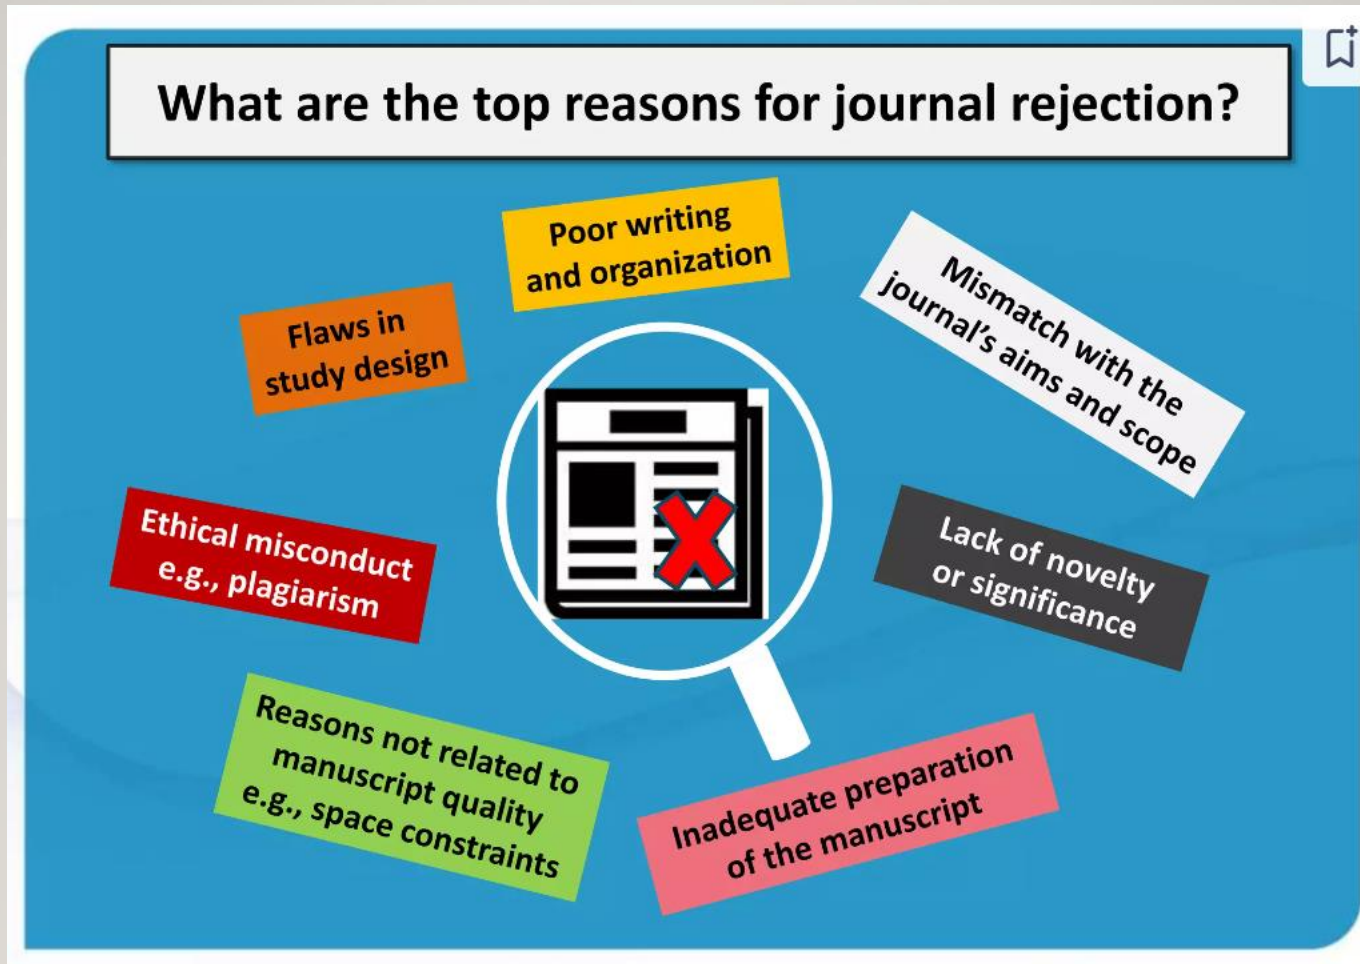

- Well organised
 - Address common themes at start
 - Use a 'quote and response' OR numbering system of points raised by each referee
- Informative
- Provide full explanations
- Do not overlook or ignore any points
- Assertive (and polite)

Decision – usually up to 3 months

- **Rejection without review** (editor's decision), usually very fast
- **Rejection after review**
- **Rejected but re-submission encouraged**
- Major revision (the paper might be reviewed again)
- Minor revision
- **Acceptance**

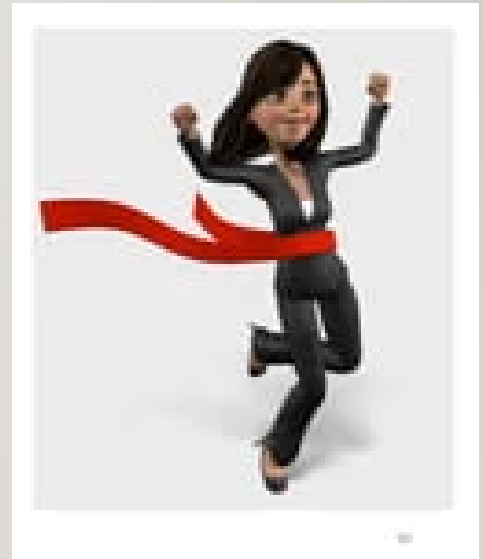

IF accepted

- Proofs: typeset material to check
- Review the proofs promptly.
- Some things to check:
 - Completeness (presence of all components)
 - Accuracy (absence of typographical errors in text and references)
 - Placement of figures and tables
 - Quality of reproduction of figures
- Note: This is not the time to rewrite the paper.

A final step
